

Superstore Sales Analysis Dashboard.

BRD – Superstore Sales Analysis Dashboard

1. Project Title

Superstore Sales & Performance Analytics Dashboard

2. Project Objective

To analyse sales, profit, and customer performance, product categories, and shipping modes. The dashboard will help identify high revenue areas, improve profitability, and optimize shipping strategies.

3. Business Problem / Opportunity

The organization currently lacks a consolidated view of:

- Which customer segments are most profitable.
- Which products drive high sales but low profit.
- Which regions require operational improvement.
- How shipping mode affects delivery time and profit.

By Analysing these patterns, the business can:

- Improve pricing & discount decisions,
 - Optimize product stock & marketing focus,
 - Enhance shipping efficiency.
-

4. Target Audience

Role	Use Case
Sales Manager	Track sales performance by customer & region
Product Manager	Identify high-performing & underperforming products
Operations Team	Review shipping efficiency & reduce delays
Business Leadership	Strategic decision-making & forecasting

5. Scope

Included:

- Customer performance analysis
- Product category & sub-category profitability
- Sales trend analysis
- Shipping performance analysis

Excluded:

- Inventory forecasting
 - Supplier/vendor performance
 - Real-time live transactions
-

6. Data Source(s)

Dataset Name	Type	Format	Description
Superstore Sales Dataset	Structured	Excel / CSV	Contains order, product, customer & shipping data from a retail store

Number of Records: ~9,000+

Time Period Covered: Multi-year sales data

7. Key Metrics / KPIs

KPI	Description
Total Sales	Overall revenue generated
Total Profit	Net profit after cost
Total customer	All customers
Total Quantity Sold	Number of items sold
Average Order Value	Sales ÷ Number of orders
Sales by Segment	Consumer vs Corporate vs Home Office
Sales in each state	Shipment in each state
Average Shipping Days	Ship Date – Order Date

8. Deliverables

Item	Description
Dashboard (Power BI / Excel)	Interactive dashboards for Customer, Product & Shipping analysis
Dataset Assessment Report	Data profiling & cleaning summary
DAX / Calculated Measures	Formulas to support dashboard KPIs
Final Presentation	Summary of findings & recommendations

9. Timeline / Milestones (5 Days Plan)

Day	Task
Day 1	Data understanding & Cleaning
Day 2	Dataset assessment & KPI definition
Day 3	Build Customer & Product dashboards
Day 4	Build Shipping & summary dashboards
Day 5	Prepare final presentation & documentation

10. Notes / Assumptions

- Negative profit values represent loss and will be analyzed.
- Shipping time is calculated as difference between **Order Date** and **Ship Date**.
- Dataset is assumed to be complete and accurate.
- Currency assumed to be USD.
